| SCOPE        | Storage and distribution of medicinal products |
| REVIEW CYCLE | Annual                                         |

## 1. Distribution principles

Medicinal products must be sourced, stored, handled and transported within authorised channels with traceability and protection from falsification.

## 2. Temperature control

Products labelled for refrigerated storage are maintained at 2 C to 8 C. Qualified packaging, calibrated monitoring and documented receipt checks are required.

## 3. Dispatch evidence

Each cold-chain dispatch records product, lot, quantity, logger identifier, dispatch time, consignee and transport lane.

Continuation of POL-GDP-07 | Version 3.1

## 4. Excursions

A temperature excursion triggers quarantine, impact assessment by qualified personnel and a disposition record. Product may not be released solely from an automated recommendation.

## 5. Returns and recalls

Returned medicinal product remains segregated until identity, condition, traceability and storage history are verified. Recall instructions are acknowledged within two hours.

## 6. Subcontractors

Transport subcontractors are qualified, trained, monitored and governed by written quality responsibilities. Material changes require prior notice.

## Decision matrix

| Event                   | Required action       | Deadline  |
|-------------------------|-----------------------|-----------|
| Temperature excursion   | Quarantine and notify | 2 hours   |
| Suspected falsification | Block and escalate    | Immediate |
| Recall                  | Acknowledge and trace | 2 hours   |

|              |                           |
